(650) 922-3396

Overview:

The experience I've gained thus far in my career has exposed me to a wide variety of projects and contexts. These have afforded me the opportunity to be part of effective teams responsible for delivering high quality products to some of the largest organizations in the world. Having to perform on a high number of projects in such fast-paced, demanding environments has afforded me experience and skill with balancing multiple deadlines while producing quality work.

Skills:

Design Tools - Illustrator, Indesign, Photoshop
Prototyping - Axure, InVision, in-browser
Code - HTML, CSS (& Sass), JQuery, Git
proficiency
Research - Usability testing, Statistics

Languages:

Spanish - Full working proficiency
Russian - working proficiency
German - Limited working

Education:

June 2012:

University of California San Diego

B.Sc. Cognitive Science w/ spec. in Human Computer Interaction

Experience:

Feb '13 - current:

Rain Agency / UX Designer

At Rain, I am part of an effective User Experience team in a very fast-paced digital agency. In my involvement with the team, I produce a variety of design deliverables: wireframes, click-through wireframes, front-end prototypes in code, sitemaps, usability studies and analyses, user scenarios, personas etc.

Having been a developer-heavy environment makes me very well versed in interacting and collaborating with developers during the cycle of a project.

march '12 - June '12:

UCSD Interactive Cognition Lab research intern/assistant

I worked with others in a lab setting as a research assistant on an ongoing cognitive ethnography project with which the Interactive cognition lab was involved. I demonstrated ability to quickly learn and adapt to using newly acquired skills involving the use of coordinated audio-visual data analysis software to complete the tasks which I was assigned. At the end of this internship, I trained the next person to carry out these tasks.
